Why Touch Technology?

Touch technology provides a fast and intuitive interface for users.
Computer literacy is no longer an issue as interaction with your content
is natural trough touch gestures.
No keyboard and mouse ensures a neat and efficient environment.
Create a bright, colourful touch experience that engages and unites your
audience in the classroom and beyond.
Multi-touch technology facilitates collaboration, increasing productivity
and profitability.
Through tablets and smartphones, touch is not a new concept anylonger,
Children and adults alike naturally adopt to large format screens.
Presenting interactive material ensures the focus of your audience remains
constantly fixed.

Natural

Engaged

Collaborative

Benefits of Touch LED?

Easy to use with any windows laptop or computer.
Gives full touch access to any program or app
installed on your Operating System.
Facilitates hand writing recognition that automatically
converts hand writing to text.
Navigate through documents, videos, presentations or websites using gestures.
Share your documents, graphs and multi-media with anyone, anytime.
Facilitates annotating over any application.

Benefits of Touch LED?

Touch gestures is more natural to humans than moving and clicking the
presentation device (mouse or clicker)
Brainstorming and collaborating on windows and or documents is profoundly easy.
Annotating on programs greatly enhances productivity and experience turning the
experience into a multi-way channel where all participants can add ideas for
engagement.

Elevates your chosen software suites

Touch LED Panels is not restricted to any one industry

Small to large office | Small to large boardroom | Small to large training room | Brainstorming room

Self service Kiosk
Engage with users and customers by allowing them to interact with photos, videos, documents, webpages, global maps and all kinds of different applications.

Architecture
Experience a whole new level of possibilities when designing and creating architecture projects. Facilitate virtual tours and deeper level of interaction with a greater level of detail.

Boardroom
Present meetings on the Touch panel in your boardroom & schools. Make use of the Microsoft office products to organise and manage your meetings.

Conferencing
Explore live webinar meetings over the web to present, discuss or demonstrate. Participants can view documents and applications via their computers, while shared audio allows for presentation and discussion.

Meeting rooms create a collaborative environment where great ideas are discovered, nurtured, and discussed. Where creative imaginations get a space to come to life. Where exciting possibilities get sketched out on scratchpads. And today's technology has the media to help make it happen. To boost communication efficiency, Hikvision developed various commercial display packages for conference room scenarios, such as ample screen size and multi-screen wireless projection for efficient content sharing and discussion, smart interaction for more impressive presentations, and more.

Conventional meeting rooms often require a projector and all the required cabling, a white-board and writing utensils, creating stress as all need to be in top working condition as required.
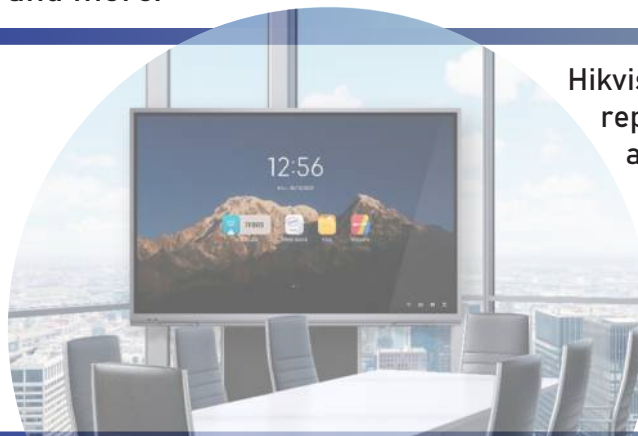

Hikvision's all-in-one solution replacing all the conventional and supports wireless projection, smart whiteboard, free annotation, remote meeting, scanning code sharing, and more. Meeting every demand for a small to medium size conference room.

Adanced Industial Design

- 4K anti-glare, 0-gap bonding screen
- Anodizing, 150-mesh sandblasted metal frame
- Slim body with thinnest part only 22.8 mm Linear pen slot with magnetic holding points

Easy Projection

- Supports cable, Wi-Fi, and Airplay projection
- Supports simultaneous projection from 4 signal sources
- Supports HDMI loop out to establish simultaneous, multiple-IFP projection
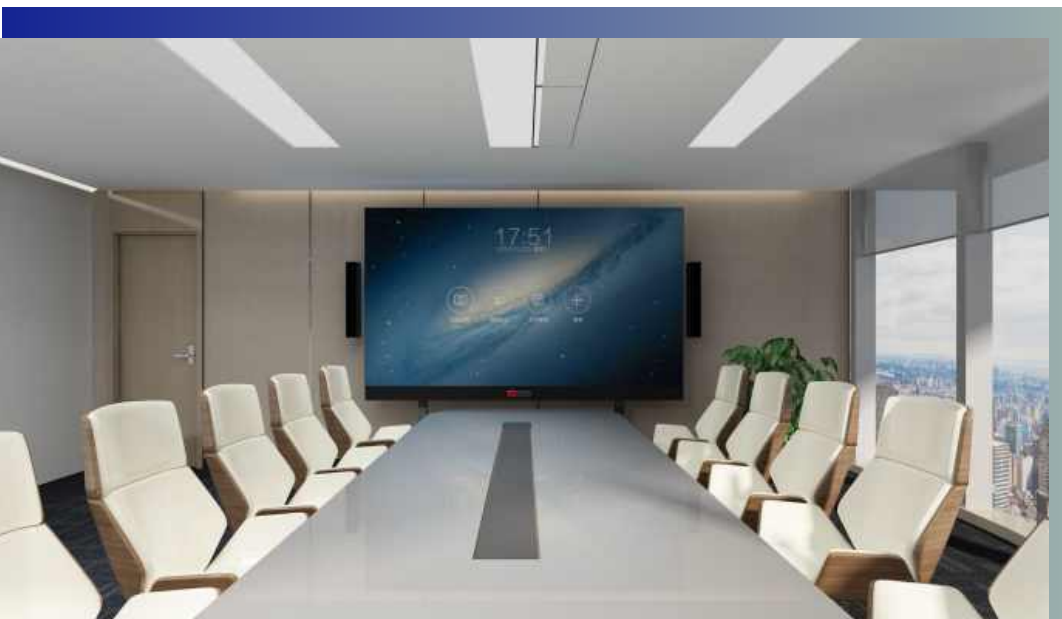

Smart Whiteboard

- 45-point IR touch for multiple people drawing simultaneously
- Mohs level 7 hardness glass, resistant to fingerprints and scratches
- Supports inserting images, tables, flow charts, etc

Remote Conferencing

- With built-in 8 MP camera and 6-microphone array, users can hold remote conferences with ease

Aver DI30 AI Classroom Auto Tracking Camera

Powerful AI-tracked PTZ cameras to support in-person, hybrid and remote Learning

"We did our research and realized that Aver's AI-driven automatic PTZ system is superior to even the best audio-tracked devices. No lecture hall is quiet enough to make audio-tracking work, but the power, flexibility, multi-functionality and simplicity of the AVer system solves for that problem and unlocks features we didn't even know we needed. We are delighted with our choice."

- Jose Tagle, Director of Technology with the Buckley School
